QuestionAnswer What are the main functions of the human skeletal system covered in BSC2093C? The human skeletal system provides structural support, facilitates movement, protects internal organs, produces blood cells, and stores minerals like calcium and phosphorus. How does muscle contraction occur at the cellular level in anatomy physiology BSC2093C? Muscle contraction occurs through the sliding filament mechanism, where actin and myosin filaments slide past each other using ATP, triggered by nerve impulses that release calcium ions to initiate contraction. What are the differences between the central and peripheral nervous systems as discussed in BSC2093C? The central nervous system (CNS) consists of the brain and spinal cord, processing and integrating information, while the peripheral nervous system (PNS) includes all nerves outside the CNS that transmit signals between the body and CNS. How does the respiratory system facilitate gas exchange according to BSC2093C? The respiratory system facilitates gas exchange primarily in the alveoli of the lungs, where oxygen diffuses into the blood and carbon dioxide diffuses out, driven by differences in partial pressures. What is the role of the cardiovascular system in maintaining homeostasis as explained in BSC2093C? The cardiovascular system maintains homeostasis by transporting oxygen, nutrients, hormones, and waste products, regulating blood pressure, and distributing heat to maintain body temperature. Which hormones are primarily involved in the regulation of blood glucose levels in BSC2093C? Insulin and glucagon are the primary hormones involved; insulin lowers blood glucose levels by promoting cellular uptake, while glucagon increases blood glucose by stimulating the liver to release stored glycogen. What are the key structural features of the human heart discussed in BSC2093C? Key features include four chambers (two atria and two ventricles), the septum dividing the heart, valves (tricuspid, pulmonary, mitral, aortic), and major vessels like the aorta and pulmonary arteries.
